Metal Detector Armand Prospector 4 England

Armand Prospector 4 - universal metal detector for demanding users

Capable of finding military and coins. Easy to use while providing unforgettable memories. It will please every enthusiast of history and collecting. Armand Prospector 4 is a metal detector which combines effectivity and quality.

Why Armand Prospector 4?

- Detector is always ready to work. Batteries allow him for many hours of searching.
- Low energy consumptions is economical and ecological.
- Built-in flashlight illuminates the area and makes work easier.
- Detector's weight is only 1,2kg. It's light and You can take it everywhere.
- Whole search can be done using single device. Armand Prospector 4 reacts to all kinds of metals, both ferrous and non-ferrous.
- Coil is fully waterproof. No conditions can stop Your search.
- Assembly of the device takes only a moment. When disassembled You can easily put it in bag for transport.
- Detector has mini jack socket which is compatible with any mini jack headphones. Switching to them reduces power consumption and provides better sensitivity.
- LED and acustic signal will inform You about low battery level.
- Prospector 4 has a RESET button. Pressing it sets ground level and balances output signal.
- Carrier tube has adjustable armrest and button-like latches, which provides ergonomy and comfort.
- Traditional knobs and switches layout allows easy and intuitive handling.

Multiple functions and easy handling

Device is equipped with switch activated battery test. Built-in rechargeable batteries allow longer work time and eliminate the need to open the device during the search. Detector's parameters are controlled using 5 knobs. Switches located at front panel allow change of working mode and battery level test. Ground/Discrimination switch can be used in both static and dynamic mode.

Detection modes:

Armand Prospector 4 has both static and dynamic mode.

- In static mode detector reacts to metals when stationary and when moving the coil.
- In dynamic mode there is autobalancing of ground level and detection is possible only when you move the coil.

Detector has LED based detection indicator. Light point moves left when non-ferrous metal is detected and right when ferrous is detected. This indicator is also used for showing battery level during battery test.

Metal detection is communicated using sound from the build-in speaker. When headphones are connected speaker is muted.

High quality product

Universal metal detector Armand Prospector 4 has robust and ergonomical case. Aluminium tube is coated with stove enamelled what guarantee durability and aesthetics. Detector uses modern carrier tube with adjustable armrests with black foam and button-like latches. Part connected directly to coil is made of stiff plastic tube.

Armand Prospector 4 is successor to popular Prospector 3. It uses more ergonomical and comfortable knobs and switches. Armand Prospector series has been improved for over 20 years.

Detector is produced in Poland by Armand Metal Detectors company.

Armand Prospector 4

- universal detector
- multiple detection modes
- built-in batteries
- built-in flashlight

In package:

- metal detector Armand Prospector 4 England
- charger
- instruction manual in English
- 24 month warranty

Specification:

- detector type: VLF, analog
- frequency: 7,8 kHz
- search modes: static (with/without discrimination), dynamic (with/without discrimination)
- weight: 1,25 kg
- coil diameter: 28,5 cm
- power supply: build-in batteries
- work time: dozen - depends on sound module activity and whether headphones are being used
- charging time: about 8 hours
